Office Action Summary	Application No. 10/565,333	Applicant(s) JAVENIUS, AKE	
	Examiner /Thor S. Campbell/	Art Unit 3742	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 14-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nuns et al.(US 4987828) in view of Dagerskog et al. (US 4565704).

Nuns discloses:

In reference to claims 14, 26:

A device for making omelettes, the device comprising: **a conveyor** for transferring plates linearly through the device from a position for supplying each plate with omelette batter to a position for removal of a finished omelette from the device; at least **two separately controllable induction heaters positioned under the conveyor** in two treatment stations, the plates being of magnetic material.

Dagerskog discloses a conveyer cooker having at least one infrared heater positioned above the conveyor.

It would have been obvious to add the infrared heater to the Nuns device since it is known that infrared heating is better suited for top side browning of food products.

Art Unit: 3742

In reference to claim 15-25, Nuns and Dagerskogs teach the basic invention except the rotor type dispensing filling stations, etc....but such rotor type dispensing systems are well known in the art, as suggested by applicant. It would be obvious to one of ordinary skill, routine creativity and common sense to modify the device of Nuns to include the rotor type dispensing means in order to take advantage of the space saving aspects of such a rotor type dispensing system over a linear system.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
